LokAI — Final Design System & Product Context (v2)

1. Product Context

LokAI is a multilingual AI-powered civic and legal assistant designed for Indian users. It helps users understand legal situations, know their rights, and take action such as generating RTIs or complaint letters. The product focuses on bridging the gap between understanding a problem and taking formal action.

2. User & Emotional Context

Primary users are everyday Indian citizens with little to no legal knowledge. They often feel confused, anxious, and unsure about legal systems. The UI must feel calm, structured, and trustworthy.

3. Design Philosophy

Slightly expressive but highly structured. Use soft gradients and warmth while maintaining strict layout, hierarchy, and clarity. Legal ≠ boring, but must remain calm and authoritative.

4. Color System

Surface Base: #FAFAF7, Secondary: #F4F2EE, Card: #FFFFFF. Primary Accent: #1C3A6E (legal navy). Warm Accent: #C4724A. Cool Accent: #7B9EC4. Semantic colors: Success #2D6A4F, Warning #B7791F, Error #9B2C2C.

5. Typography

Display (Serif) for headings, Sans-serif for body (Inter). Devanagari support using Noto Sans Devanagari with increased line height.

6. Spacing & Layout

8pt grid system: 4, 8, 12, 16, 24, 32, 48, 64. Max width 720px for content. Card-based layout with generous spacing.

7. Core Components

Response Card, Input Field, Buttons (primary, secondary), Confidence Badge, Citation Chips, Document Preview.

8. Core UX Flows

Ask → Clarify → Structured Response → Action → Document Generation → Boundary/Low Confidence handling.

9. Screen Specifications

Screen 1: Dashboard. Screen 2: Ask Input. Screen 3: Response Card. Screen 4: Document Generator. Screen 5: Boundary State. Each screen must follow strict hierarchy and structured information presentation.

10. Figma Make AI Usage

Use this document as input. Generate screens individually. Refine manually for spacing, typography, and hierarchy.
